FULLY WELDED BALL VALVES - FEATURES AND BENEFITS

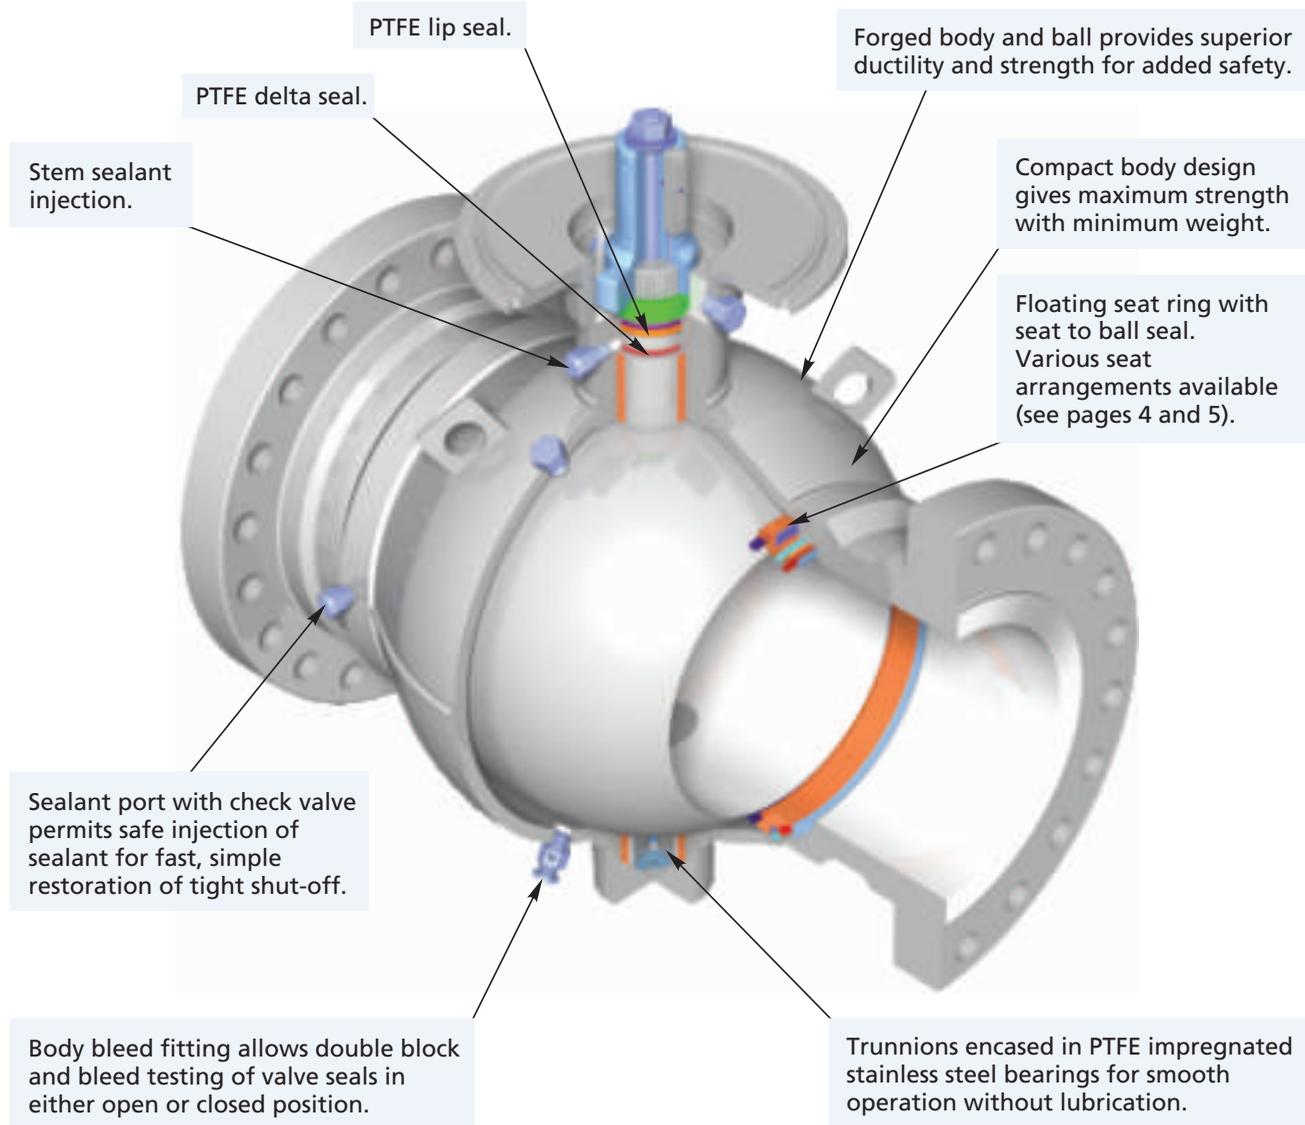

One of the most trusted valves in the petroleum industry, it combines the strength of forged components with a lightweight and compact spherical design.

CAMERON Fully Welded Ball Valves satisfy ASME/ANSI 150 through 2500 (PN 20 through PN 420) and API 2000 through 10,000 standards. Made of forged steel to assure uniform fine grain structure and toughness, they may be specified in sizes from 2 in. to 56 in. (50 mm to 1400 mm).

Engineered for heavy duty, maintenance free performance, the CAMERON Fully Welded Ball Valve is commonly selected for a number of applications, including:

- Gas transmission
- Products pipeline
- Measurements skids
- Dehydration systems
- Gas separation systems
- Natural gas storage
- Dryer service
- NGL plants
- NGL pipeline
- Compressor stations
- CO₂ services
- Offshore
- Subsea

The distinctive design of the CAMERON Fully Welded Ball Valve gives it maximum strength at minimum weight as well as maximum resistance both to pipeline pressures and stresses. The compact, spherical design also eliminates body flanges, thus reducing overall size and potential leak paths.

FULLY WELDED BALL VALVES FEATURES AND BENEFITS

REPLACE STEM SEAL

In the unlikely event of a stem seal needing replacement, it can be accomplished safely with the valve in service.

With the body cavity vented all line pressure to the stem area is also vented. (Please contact your Cameron's Valves & Measurement group representative to obtain maintenance procedures.)

SAFEGUARD DOWNSTREAM WORK

With the valve closed and the vent fitting open, the possibility of the line media reaching a work area is removed.

FIRE TESTED FOR SAFETY

CAMERON Fully Welded Ball Valves can be supplied to API 6FA, API 607 and ISO 10497 standards.

Fire test programs are ongoing. If industry standards change or customer requirements vary from above, call your Cameron's Valves & Measurement group representative.

STANDARDS AND SPECIFICATIONS

(See page 8 for specification details)

SIZES

- 2 in. through 56 in.
(50 mm through 1400 mm)
Full, Reduced and Venturi Bore

PRESSURE CLASSES

- ASME/ANSI Class 150 through 2500
(PN 20 through PN 420)
API 2000 through 10,000 psi

OPERATING TEMPERATURES

- From -50°F to 375°F (-46°C to 190°C)

END CONNECTIONS

- Flanged, Weld and Weld by Flange, etc.

BODY STYLES

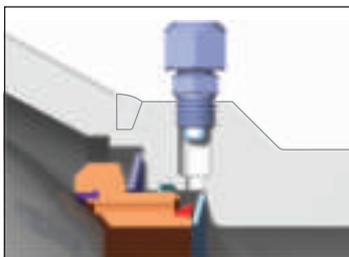

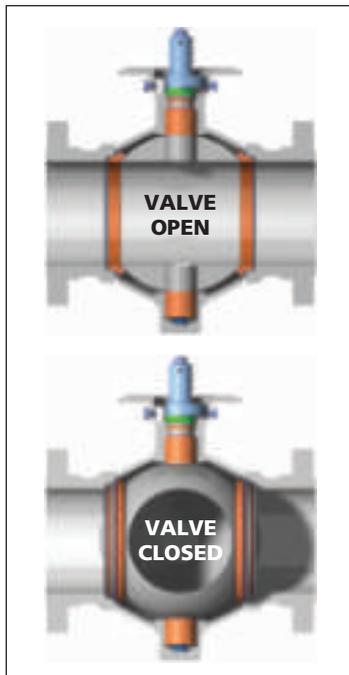

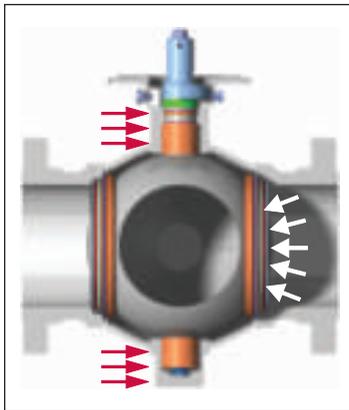

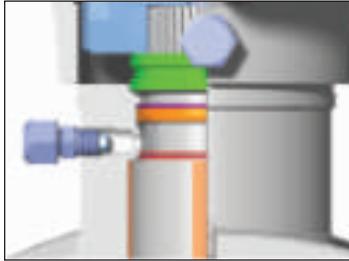

- Fully Welded

STANDARD MATERIAL

- Forged Carbon Steel

OPTIONAL MATERIALS

- Seat/Seal Trim options include: regular, corrosion resistant and Sour (NACE MR0175)

STEM SEALS

Delta seals and lip seals made of PTFE are incorporated in the upper stem area. PTFE is a low friction, non-deteriorating material that is not subject to rapid decompression explosion. Most valve sizes have a provision for the injection of sealant to establish a secondary seal.

TRUNNION SUPPORTED BALL ALLOWS LOW TORQUE OPERATION

Regardless of size or pressure rating, every CAMERON ball valve is trunnion mounted.

High strength forged stems are located in PTFE impregnated stainless steels bearings for smooth, accurate operations.

Trunnion mounted stems absorb the thrust from line pressure, preventing excess friction between the ball and seats, so even at full rated working pressure, operating torque stays low.

DOUBLE BLOCK AND BLEED

Whether in the fully open or fully closed position, pressure on each side of the ball is blocked from the body cavity by the seat ring.

The body cavity can then be bled down or drained through the body port.

When you block and bleed a CAMERON Ball Valve the following can be accomplished:

TEST VALVE INTEGRITY

When CAMERON Ball Valve body is vented this verifies the seat seals integrity. This test can be performed with the valve open or closed prior to facility maintenance. By verifying valve integrity unforeseen valve leakage can be prevented.

SECONDARY SEAT SEAL

The sealant injection system provides a fast, simple way of restoring tight shut off if any foreign object should damage the sealing surfaces.

The injection system can also be used for routine flushing of the seat ring area in services where this may be required.

FULLY WELDED BALL VALVES STANDARD SEAT DESIGN

In service since the early '60s, the standard seat arrangement has proven itself to be of sound design.

This arrangement is available in all CAMERON Fully Welded Ball Valves and includes all features and benefits indicated on the preceding pages.

FEATURES AND BENEFITS

UPSTREAM SEALING

At low pressure, seat to ball contact is maintained by Belleville springs. At higher pressures, seat contact is reinforced by line pressure.

AUTOMATIC INTERNAL RELIEF OF BODY PRESSURE

Relief of excess body cavity pressure is automatic, avoiding dangerous pressure build up. Any pressure exceeding downstream line pressure by approximately 200 psi pushes the downstream seat away from the ball, allowing the pressure to relieve into the pipeline.

ROTATING SEAT RINGS

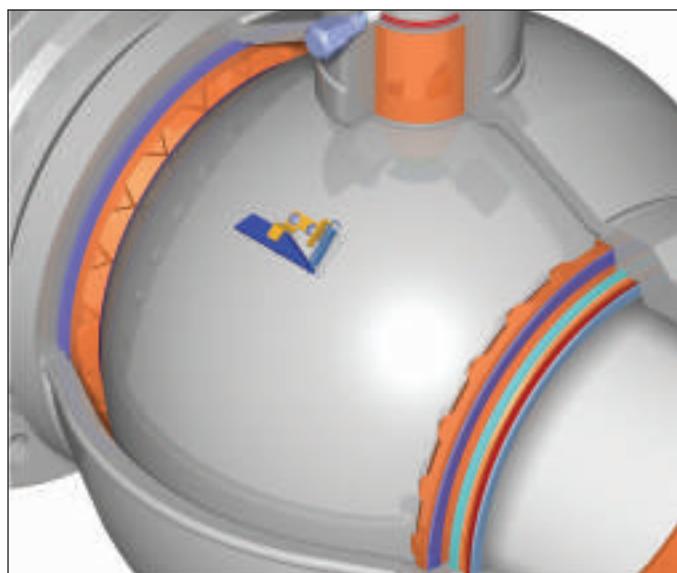

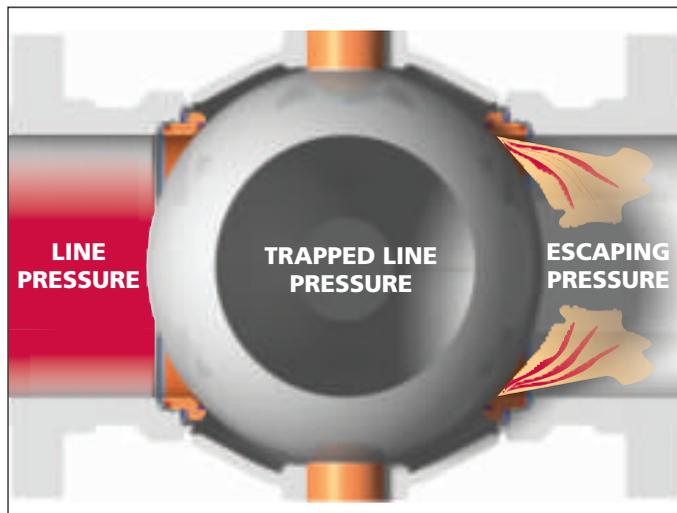

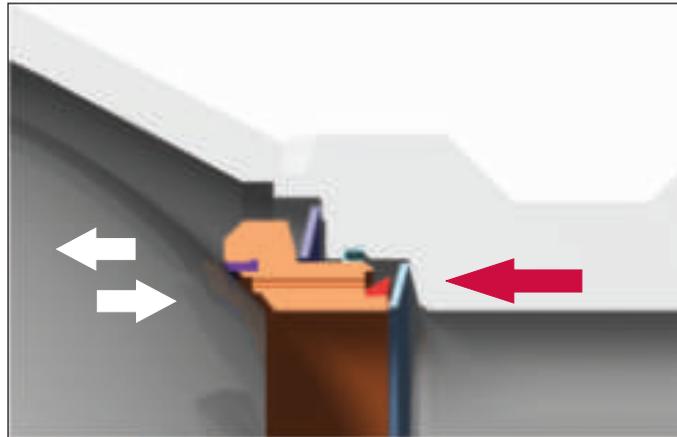

A standard in the CAMERON Fully Welded Ball Valve sizes 14 in. (350 mm) and larger, the CAMERON Fully Welded Ball Valve incorporates the exclusive rotating seat feature. Both seats rotate 15 degrees each time the valve is closed, exposing a new pinch point, evenly distributing seat wear.

DISTRIBUTE SEAT WEAR

The pinch point is the area of the seat insert that experiences an increased velocity when the valve is seated close and unseated open. This is where the seat seal experiences the most wear, and in most valves where a leak path begins. By rotating the seat ring, the pinch point wear is distributed throughout the seat seal providing a substantial increase of seat life.

PREVENTS BUILD UP

In some services a valve can experience harmful sediment build up around the seat ring. This can cause the seat to stick and not seal properly. The CAMERON Fully Welded Ball Valve with exclusive rotating seat can handle these harsher services. As the seat rotates it will break up or prevent any build up.

FULLY WELDED BALL VALVES ALTERNATE SEAT DESIGN

The CAMERON Fully Welded Ball Valve is available with double acting and metal to metal seats to accommodate a variety of applications and customer preferences.

DOUBLE ACTING

CONVENTIONAL UPSTREAM SEALING

With the upstream pressure, the bi-directional body to seat seal is pushed toward the front sealing face of its retaining pocket. This creates an unbalanced pressure annulus between the body seal and the inside diameter of the seat insert, forcing the seat insert against the ball.

DOWNSTREAM SEALING

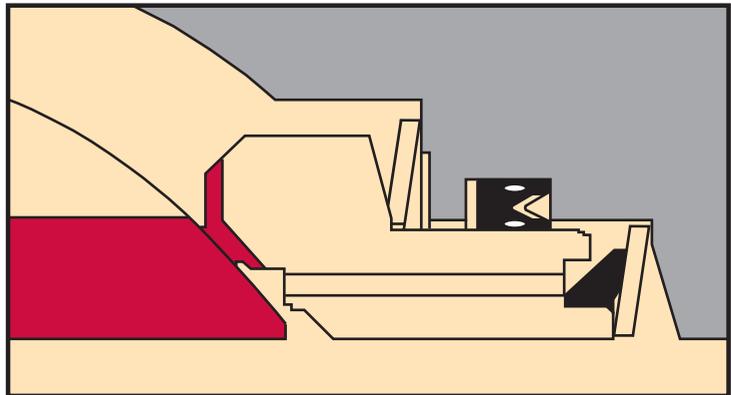

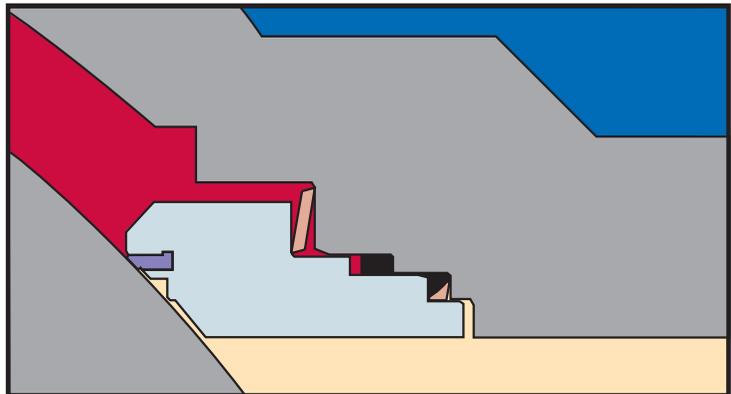

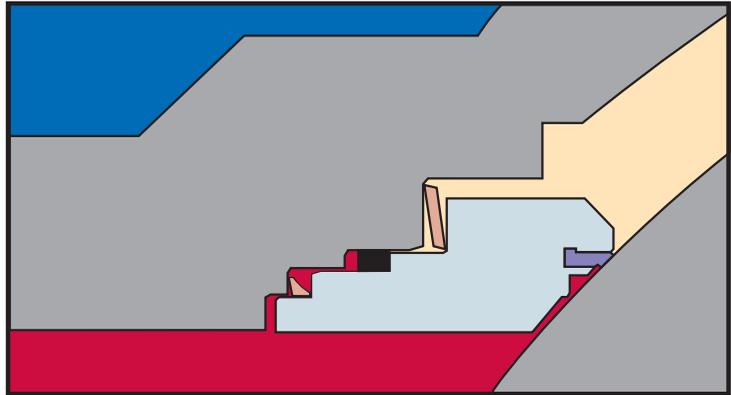

With the downstream pressure, the bi-directional body to seat seal is pushed toward the back sealing face of its retaining pocket. This creates an unbalanced pressure annulus between the outside diameter of the seat insert and the body seal diameter, also forcing the seat insert against the ball.

METAL-TO-METAL

For severe service applications where a soft seat insert would be unsuitable, a metal-to-metal design can be provided. In this design both the seat and the ball are coated with Tungsten Carbide which is resistant to corrosion and wear making it suitable for abrasive services. This type of seat is upstream sealing and incorporates internal relief of body pressure.

ELASTOMER SEAL

A small elastomer seal held by the seat ring performs two services. It wipes the surface of the ball to prevent surface damage while providing a bubble tight seal at low pressures.

STANDARDS AND SPECIFICATIONS

DOUBLE ACTING - T32

SIZES

- 8 in. (200 mm) through 48 in. (1200 mm)

PRESSURE CLASSES

- ASME/ANSI Class 150 through 900 (PN 20 through PN 150)

OPERATING TEMPERATURES

- -50°F to 250°F (-46°C to 121°C)

METAL-TO-METAL - T34

SIZES

- 2 in. (50 mm) through 48 in. (1200 mm)

PRESSURE CLASSES

- ASME/ANSI Class 150 (PN 20) through API 10,000

OPERATING TEMPERATURES

- -50°F to 375°F (-46°C to 190°C)

FULLY WELDED BALL VALVES IN-LINE SPHERE LAUNCHER

Proven by years of service, the CAMERON in-line sphere launcher offers many advantages over traditional launcher systems.

FEATURES AND BENEFITS

COST EFFECTIVE

The launcher's unique design greatly reduces the cost of constructing a launching system.

This design combines three valves into one. A conventional design requires a main line block, launching and kicker valves.

The CAMERON in-line launcher does the job of both the main line block and the launching valve. The pig is inserted directly into the main flow line eliminating the need for a kicker valve. Eliminating the need for two valves and related piping supports produces an overall cost savings.

EASY INSTALLATION

The CAMERON design is simple and easy to install. In an existing gathering system, the CAMERON launching valve is easily inserted without major fabrication.

DOUBLES AS BLOCK VALVE

Because the launcher valve has all the features of a standard CAMERON Ball Valve, it can double as a main block valve in virtually any system.

FIELD PREFERRED

The speed and ease of the CAMERON launching system make it the preferred method among field personnel.

WIDE VARIETY OF SIZES AVAILABLE

The CAMERON launcher is available in sizes to accommodate spherical pigs from 2 in. to 30 in. (50 mm to 750 mm) in diameter.

ACCOMMODATES MULTIPLE SPHERES

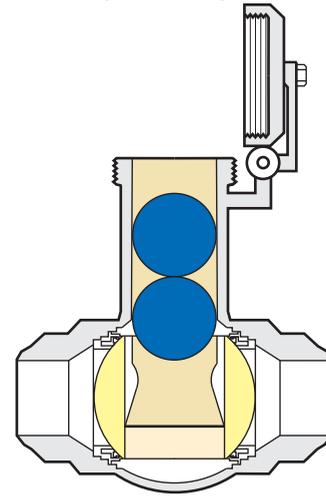

The launcher can be built with an extended barrel, enabling the operator to stack multiple pigs in the barrel and launch them simply by operating the valve.

ADDITIONAL OPTIONS AVAILABLE

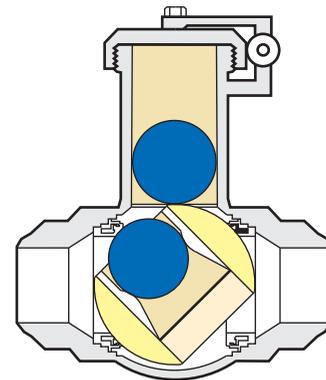

The following options can help tailor the launcher to a variety of applications: manual gear operators; pneumatic, hydraulic, gas over oil and electric operators; addition of pup pipe (transition pipe).

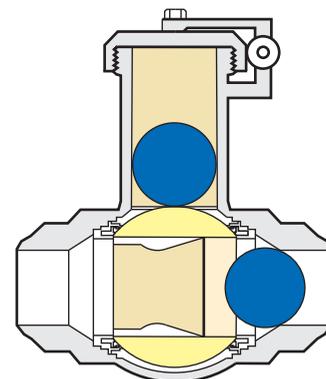

LAUNCHING SEQUENCE (TOP VIEW)

1. Valve is closed.
2. Valve body is vented.
3. Hinged door opens to load sphere.

4. Extended barrel allows several spheres to be loaded.
5. Door is closed.
6. Valve body is re-energized.
7. Valve is opened.

8. Spherical pig in launch position.

FULLY WELDED BALL VALVES ACCESSORIES

Quality CAMERON accessories are available to improve the CAMERON Fully Welded Ball Valve's adaptability to a wide variety of situations.

HIGH HEAD FOR REMOTE OPERATION

For situations in which the CAMERON Fully Welded Ball Valve must be underground, the CAMERON High Head makes the controls accessible above ground.

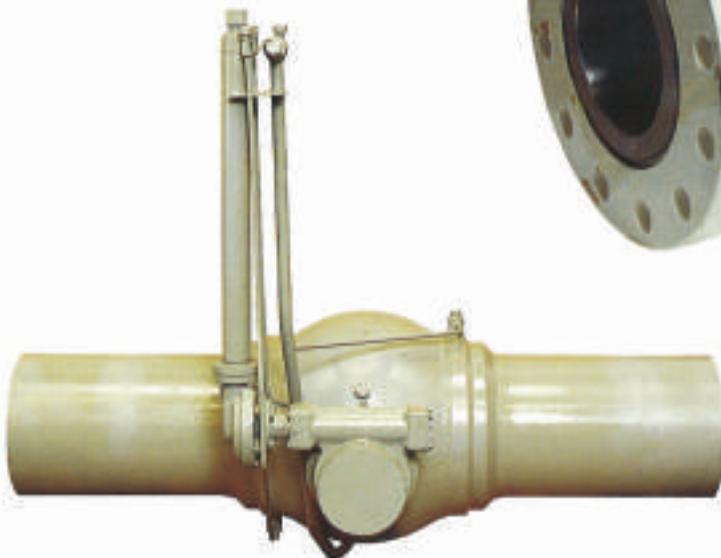

Designed and constructed to withstand punishing environments, it has proven itself in uses all over the world for many years.

SUBSEA DESIGN OFFERS IMPORTANT BENEFITS

For the same reliable performance offshore as on, the CAMERON Fully Welded Ball Valve is available with a coating and actuation designed specifically for the demands of a subsea environment.

RIGHT ANGLE IMPROVES FLEXIBILITY

CAMERON Fully Welded Ball Valves can be specified for tight spaces when fitted with a CAMERON Right Angle Extension. The valve control is turned 90 degrees from its usual position, allowing more space at the top of the valve and better access by operators.

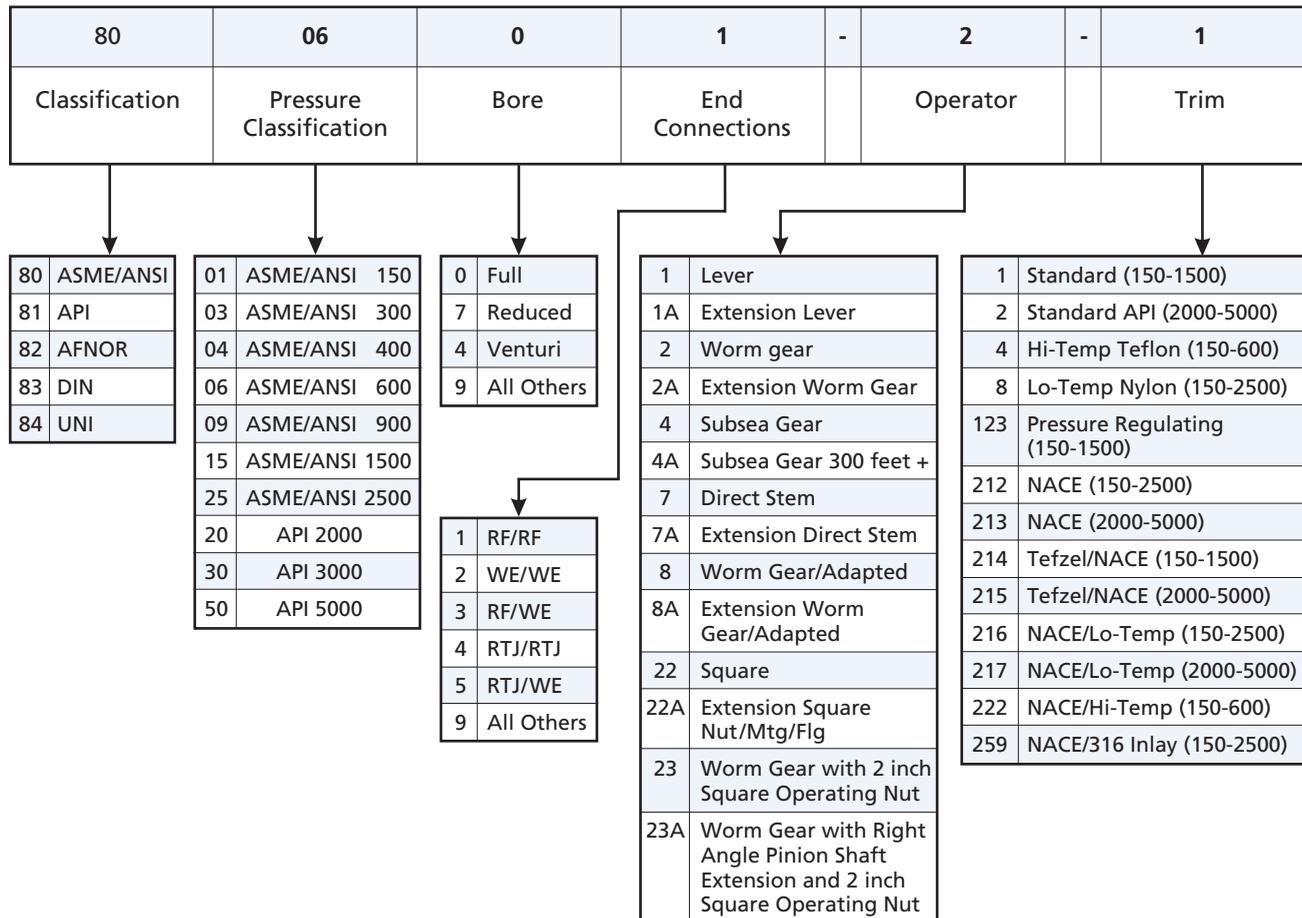

FULLY WELDED BALL VALVES HOW TO ORDER

SPECIFY THE FOLLOWING WHEN ORDERING A CAMERON FULLY WELDED BALL VALVE:

1. Valve figure number (see chart below).
2. Pressure classification (ASME/ANSI 600 lb, API 3000 psi).
3. End and bore sizes.
4. Type of end connections (unequal ends can be furnished). For weld end valves, specify I.D. or O.D., wall thickness and grade of pipe.
5. Type of operator.
6. Stem extension, if desired. Specify distance from valve centerline to center of handwheel, or top of power operator mounting flange.
7. Type of trim or application.
8. Accessories, if desired (lifting eyes, locking devices, etc.). Handwheels are included with valves, but operating levers must be ordered separately. Information on special trims and API configurations is available upon request.

SPECIFY THE FOLLOWING WHEN ORDERING ANOTHER MANUFACTURER'S POWER OPERATOR TO FIT A CAMERON FULLY WELDED BALL VALVE:

1. Valve size and pressure class and, if for field conversion, the present operator.
2. Maximum differential pressure across valve during operation and any abnormal operating conditions.
3. Speed of opening and closing, probable frequency of operation.
4. Type operator desired (electric, hydraulic, pneumatic).
5. Information on operating medium.
If electric; voltage, frequency, single or three phase, open or explosion proof motor.
If hydraulic or pneumatic; operating medium, pressure.
6. Accessories and controls; limit switches, instrumentation, valving,

FULLY WELDED BALL VALVES STANDARDS, SPECIFICATIONS AND MATERIALS

CAMERON Fully Welded Ball Valves conform to one or more of the following specifications for pressure, temperature ratings and dimensions:
ASME/ANSI, API-6D, API-6A, DIN, AFNOR, British Standards, ISO 9000 and ISO 14313.

TRIM MATERIALS FOR STANDARD VALVES

| | |
|-------------------|---|
| Pressure Range | ASME/ANSI Class 150-2500 (PN 20-PN 420) |
| Temperature Range | -20°F to 250°F (-29°C to 121°C) |
| Body | ASTM A350 Gr. LF-2(M) |
| End Connection | ASTM A350 Gr. LF-2(M) |
| Ball | ASTM A694 Gr. F50(M) Chrome Plated or ENP |
| Seat Ring | AISI 1040 |
| Seat Load Spring | AISI 1040 |
| Stem Seals | PTFE |
| Lip Seals | PTFE |
| Seat Ring Insert | Nylon |

Other trims are available upon request.

OPTIONAL TRIM MATERIALS

| Trim | Pressure Rating | Temperature Rating | Trim Numbers | |
|-----------------------------------|----------------------------|---------------------------------|--------------|-----------------------------------|
| | | | Regular | Corrosion Resistant (NACE MR0175) |
| Standard | ASME/ANSI Class 150 - 2500 | -20°F to 250°F (-29°C to 121°C) | 1 | 212 |
| | API 2000-5000 | -20°F to 250°F (-29°C to 121°C) | 2 | 213 |
| Low Temperature | ASME/ANSI Class 150 - 2500 | -50°F to 250°F (-46°C to 121°C) | 8 | 216 |
| | API 2000-5000 | -50°F to 250°F (-46°C to 121°C) | - | 217 |
| High Temperature | ASME/ANSI Class 150 - 600 | -20°F to 375°F (-29°C to 190°C) | 4 | 222 |
| Tefzel (Acidizing) | ASME/ANSI Class 150 - 1500 | -20°F to 300°F (-29°C to 149°C) | 140 | 214 |
| | API 2000-5000 | -20°F to 300°F (-29°C to 149°C) | 108 | 215 |
| Tefzel Low Temperature | ASME/ANSI Class 150 - 1500 | -50°F to 300°F (-46°C to 149°C) | 223 | - |
| | API 2000-5000 | -50°F to 300°F (-46°C to 149°C) | - | - |
| Duplex (Internal) Stainless Steel | ASME/ANSI Class 150 - 1500 | -20°F to 250°F (-29°C to 121°C) | - | 276 |
| Full Duplex Stainless Steel | ASME/ANSI Class 150 - 1500 | -50°F to 250°F (-46°C to 121°C) | - | 504 |

MATERIALS

Materials used in ball valve construction are broadly equivalent at all Cameron's Valves & Measurement group manufacturing plants. However, the availability of local supplies, the need to conform to national standards and to offer various trims may necessitate some variations. In corrosive applications, valve trims may be offered using various types of alloys and stainless steels. For more information on material specifications and properties, please contact your local Cameron's Valves & Measurement group representative.

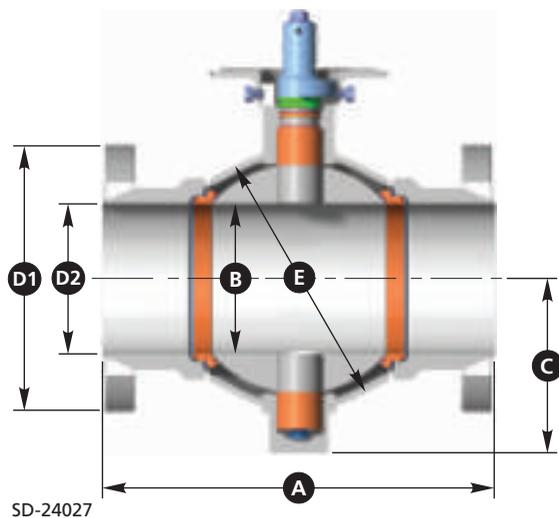

TORQUE INFORMATION

Please contact your CAMERON Valves representative to obtain a copy of the engineering bulletin which provides detailed torque information for sizing of power actuators.

DIMENSIONAL CODES FOR FLANGED AND WELD ENDS (FULL & REDUCED OPENINGS)

CODE IDENTIFICATION:

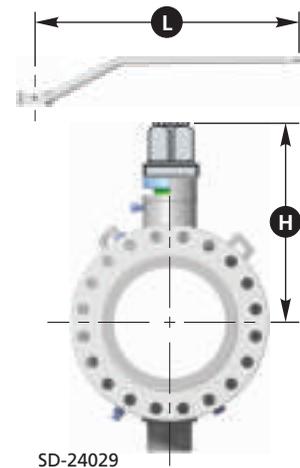

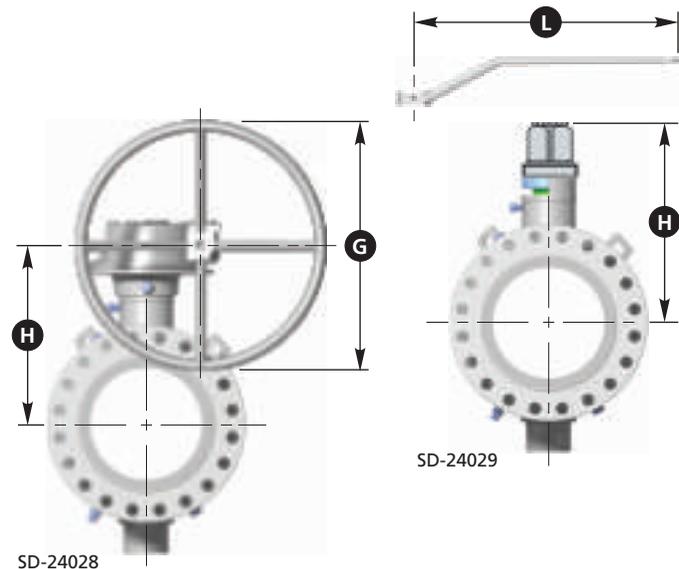

- A End to end (length dimension)
- B Bore diameter
- C Centerline to bottom
- D1 Flange outside diameter
- D2 Flange inside diameter
- E Sphere dimension

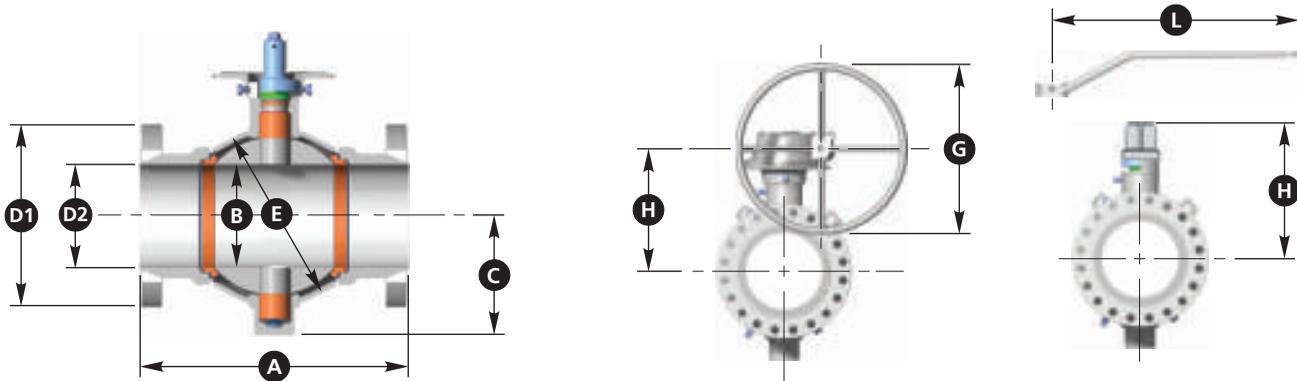

DIMENSIONAL CODES FOR CAMERON MANUAL OPERATORS

CODE IDENTIFICATION:

- G Handwheel diameter
- H Center of bore to top of square nut for lever operated valves, center of bore to handwheel for gear operated valves
- L Center of bore to end of lever

■ Length (A) of a weld x flanged end valve is one half the sum of length (A) of a weld end and a flange end of the same size and rating.

* Short pattern.

♦ Length exceeds specified dimensions in API 6D/ISO 14313.

● Dimensions of 22 in. (550 mm) flanges are per MSS-SP-44 and 26 in. (650 mm) through 42 in. (1050 mm) flanges are per ASME B16.47 Series A.

Note: Venturi opening or other reduced bore valves are available upon request.

■ Length (A) of a weld x flanged end valve is one half the sum of length (A) of a weld end and a flange end of the same size and rating.

* Short pattern.

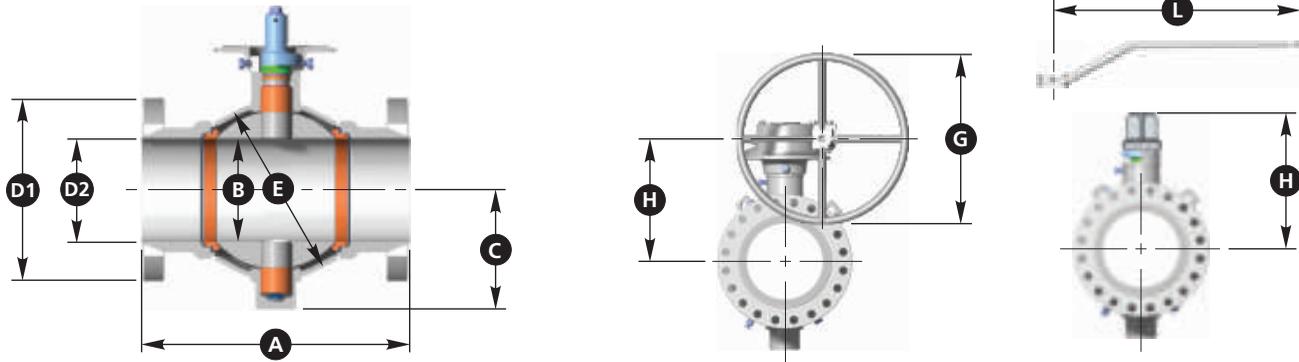

♦ Length exceeds specified dimensions in API 6D/ISO 14313.

● Dimensions of 22 in. (550 mm) flanges are per MSS-SP-44 and 26 in. (650 mm) through 42 in. (1050 mm) flanges are per ASME B16.47 Series A.

** Prior to 1/1/98 - manufactured to 16.5 in. (419 mm) short pattern length.

Note: Venturi opening or other reduced bore valves are available upon request.

■ Length (A) of a weld x flanged end valve is one half the sum of length (A) of a weld end and a flange end of the same size and rating.
* Short pattern.

● Dimensions of 22 in. (550 mm) flanges are per MSS-SP-44 and 26 in. (650 mm) through 42 in. (1050 mm) flanges are per ASME B16.47 Series A.
Note: Venturi opening or other reduced bore valves are available upon request.

■ Length (A) of a weld x flanged end valve is one half the sum of length (A) of a weld end and a flange end of the same size and rating.

* Short pattern.

Note: Venturi opening or other reduced bore valves are available upon request.

The dimensions on this page, combined with the top works dimensions on the following two pages, provide the information required for determining the overall dimensions of a CAMERON Fully Welded Ball Valve when an actuator is installed.

For additional dimensional information on CAMERON Fully Welded Ball Valves, contact your Cameron's Valves & Measurement group representative.

FULLY WELDED BALL VALVES CAMERON TOP WORKS DIMENSIONS

SQUARE NUT AND ADAPTER FLANGE (BX-1220)

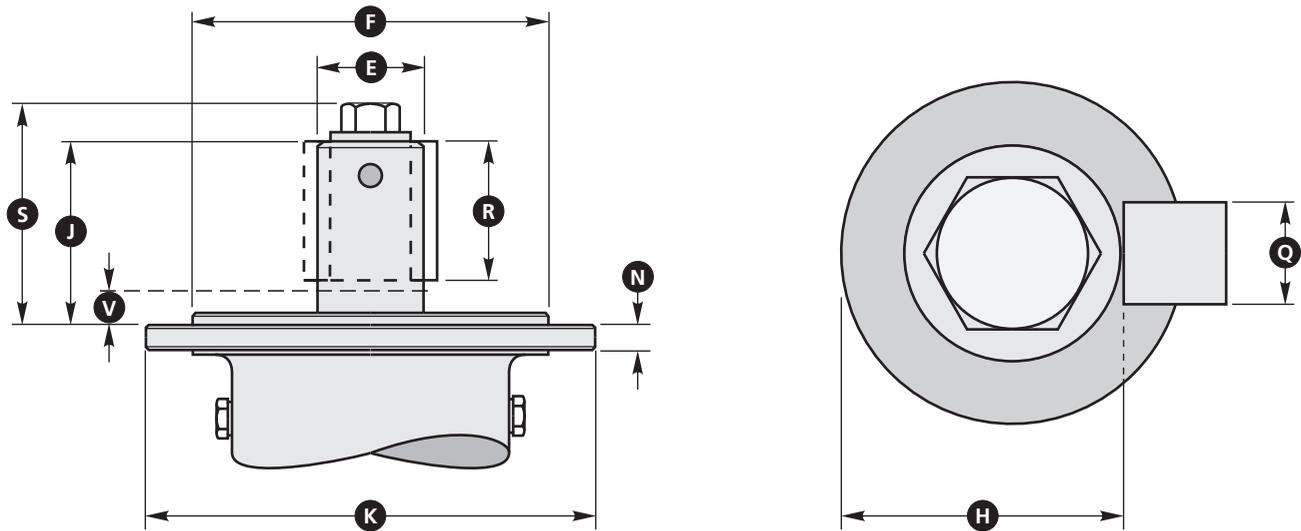

MOUNTING DIMENSIONS

| DASH NUMBER | -1 | -2 | -3 |
|-----------------------|-------------|-------------|-------------|
| Valve Stem Size in. | 1.00 | 1.50 | 2.00 |
| A Flange Dia. | 6.50 | 6.50 | 8.75 |
| B Boss Dia. | 4.747 | 4.747 | 6.997 |
| C Height of Nut | 1.94 | 2.12 | 2.62 |
| D Bolt Size | 0.44 | 0.54 | 0.66 |
| F Width of Nut | 1.50 | 2.00 | 2.50 |
| H Number of Holes | 8 | 8 | 16 |
| J Dia. Bolt Circle | 5.75 | 5.75 | 8.00 |
| Flange Bolt Size | 3/8-16 NC-2 | 3/8-16 NC-2 | 3/8-16 NC-2 |
| Bolt Torque (ft. lb.) | 30 | 30 | 30 |
| DASH NUMBER | -1 | -2 | -3 |
| Valve Stem Size mm | 25.40 | 38.10 | 50.80 |
| A Flange Dia. | 165.10 | 165.10 | 222.25 |
| B Boss Dia. | 120.57 | 120.57 | 177.72 |
| C Height of Nut | 49.28 | 53.85 | 66.55 |
| D Bolt Size | 11.18 | 13.72 | 16.76 |
| F Width of Nut | 38.10 | 50.8 | 63.50 |
| H Number of Holes | 8 | 8 | 16 |
| J Dia. Bolt Circle | 146.05 | 146.05 | 203.20 |
| Flange Bolt Size | 3/8-16 NC-2 | 3/8-16 NC-2 | 3/8-16 NC-2 |
| Bolt Torque (Nm) | 40.68 | 40.68 | 40.68 |

Notes: -1 and -2 bolt holes straddle centerline.
-3 bolt holes are on centerline.
