

## AD-200 KIT

Telescopic suction tube with filter + retention valve for impurity treatment

### AVAILABLE KITS

**AD-200 M kit**  
 (with manual nozzle)

**AD-1000 M kit**  
 (with manual nozzle)

**AD-200 A kit**  
 (with automatic nozzle)

**AD-1000 A kit**  
 (with automatic nozzle)

### USE

- The AD-200 Kit is specially designed for the AdBlue vehicle supply from a barrel of 200 litres.
- Because of its base, the kit is easy to use and to assemble. It can be put on a barrel or tank or in the wall.
- The AdBlue supply kits are made with materials compatible with this fluid to avoid deterioration both the liquid and the parts that are in touch with it.

### COMPOSED OF

- Centrifugal pump made of stainless steel with ON/OFF switch.
  - Flow: 30 l/min
  - Consumption: 3,6A
  - Motor: 0,8kW 230VAC, 50Hz single-phase, self-ventilated
  - RPM: 2800rpm
  - Continuous duty S1
  - Protection: IP-54 class F
  - ON/OFF luminous switch
  - 3m electric cable with approved plug
  - Inlet/outlet tube: 1" GAS (BSP)
- MG-80 Volumetric mechanical meter
- Metallic base with nozzle hanger
- 1,30m PP telescopic suction tube with filter and stainless steel retention valve
- 0,5m Ø1" transparent hose with stainless steel adapters and clamps
- 4m Ø1" delivery hose of double layer with stainless steel adapters and aluminium ferrules
- Supply nozzle

## AD-1000 KIT

• It includes: **adapter plug for tanks of 1.000 litres** to be mounted in the upper tank hole.
