GAUGE RECALIBRATION

# The importance of accuracy

- Are your fuel stock readings exact?
- Can you easily identify significant fuel loss?
- Can you trust your gauge readings?
- Can you readily verify fuel delivery quantities?

# How accurate is your gauge?

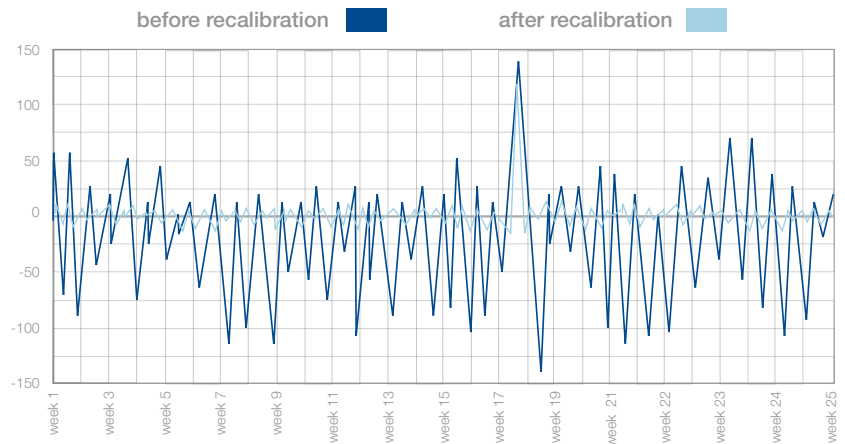

Dover Fueling Solutions offers a Gauge Recalibration Service that will significantly improve tank gauge accuracy, often without the need for a site visit.

Our real-time smart data module communicates directly with your tank gauge, allowing our analysts to perform a fully automated, remote recalibration. In the absence of our smart data module, recalibrations can be carried out by one of our on-site service technicians.

## The benefits of recalibration

- No call-out charge
- More cost-effective
- Accurate monthly reports
- Faster loss investigations

A well-calibrated tank gauge benefits your business by providing you with accurate, on demand stock readings. If your gauge is poorly calibrated, it may result in fuel losses going unnoticed, which could ultimately impact upon the profitability of your business. The graph below highlights the effect that our recalibration service could have on your data.

## How do I find out more about gauge recalibration?

To speak to a specialist, call Dover Fueling Solutions on 01695 52175 today.
