## McCabe & Sons, Inc.

Family Owned and Operated since 1938

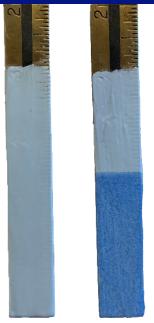

## <u>Use</u>

The gasoline paste is a light sky blue paste that turns a darker blue when immersed in gasoline, diesel, kerosene, naphtha, #2 heating oil, light crude oil, jet fuel and others.

## <u>Application</u>

Spread a smooth, even coat of
the product on the bob or
gauging device where you
expect the air/product
interface to be located. Once
entering the product, leave
immersed for approximately
ten seconds and the paste will
turn a darker blue. When
reading the results, note a
straight, sharp demarcation on
the gauging device, light blue
above/dark blue below.
